c. The Batesville Cooperative Program was established in August 2013 pairing Batesville High School students with local manufacturing professionals. These students would embark on an academic program fulfilling Indiana High School graduation requirements, working towards technical certification through strategic coursework through Ivy Tech-Batesville, and completing relevant cooperative experiences on the shop floors at three local manufacturing leaders. Students are enrolled in six credit hours per semester working towards certification in Design or Industrial Technology. All students also participate in 8-week onsite rotations under the direction of local industry professionals to simulate relevant work experiences.

d. Each collaborator establishes a specific course of study relevant to specific industry niche to recruit and support future workforce needs. Ivy Tech created one and two-year academic tracks to support individual interests and local workforce needs. Some local industry support and incentive post-secondary completion upon hire. Students completing the Ivy Tech academic track exit high school with a minimum of 24 applicable credit hours towards degree completion.

e. Batesville is located in Region 9 as defined by the Indiana Department of Workforce Development. Manufacturing is dominant employment trade in Region 9 with 23% of all employment tied to Manufacturing and 36% of income.

### **Criterion 2: Competency**

a. Ivy Tech-Batesville has created an academic track for students to explore technical education through classroom and industry-based experiences. Students who complete two years in the Batesville Manufacturing Workforce Development program will exit with a minimum of 24 applicable college credits applied towards a technical certificate in a Design or Industrial program.

b. Omit, will this check box 2.

c. Students who successfully complete either one or two years in the Batesville Manufacturing Workforce Development are able to develop relationships with local employers through personal contact, relevant work experience, and demonstrate industrial skills. Employers are able to actively recruit future workforce professionals and begin the localized training process for guided transition from high school to college and career readiness opportunities.

**Criterion 3: Continuous Improvement**

a. Students who complete two years Batesville Manufacturing Workforce Development program will earn a minimum of 24 Ivy Tech credits directly applicable towards certification in Design or Industrial Technology. Local industry partners often incentive degree completion upon employment with appropriate professional commitments.

b. Batesville High School in partnership with local manufacturing partners will analyze student outcomes through quarterly evaluations completed by mentors, credit attainment through Ivy Tech-Batesville, and academic progress towards high school diploma completion. Summative student outcomes will be measured by offer of full-time employment to student participants and/or post-secondary enrollment in a relatable field.

c. Annual meetings with community partners will be held to evaluate student program logistics, recruit new partners, and monitor career readiness skills as demonstrated upon program completion.
